

BarrierTech Sanitiser

Investigation of the product regarding risks to health and the environment

Summary

The investigation was made with the intention of reviewing how well the product would meet criteria for being labelled as safe for health and the environment.

In summary, the investigation was made based on information in the safety data sheet, information found in the open literature as well as in the European Chemicals Agency database on information of chemicals. Together with knowledge about the substances' structure and reactivity it was concluded that the product as such do not meet accepted criteria for eco-labelling because it has a biocidal effect. It can, however, still be a safe alternative for disinfection of surfaces and for hand disinfection, provided that it is used as intended and in accordance with the approved biocidal product types. The intended use is not assumed to lead to exposure to the environment or harming the health.
